Papers of the IEEE Information Visualization Conference 2009

Session 1: Bioinformatics Visualization

Chair: Jesse Kennedy

Best Paper Award: ABySS-Explorer: Visualizing Genome Sequence Assemblies.....	881
Cydney B. Nielsen, Shaun D. Jackman, Inanç Birol, Steven J.M. Jones	
Constructing Overview + Detail Dendrogram-Matrix Views.....	889
Jin Chen, Alan M. MacEachren, Donna J. Peuquet	
Honorable Mention: MizBee: A Multiscale Synteny Browser.....	897
Miriah Meyer, Tamara Munzner, Hanspeter Pfister	
GeneShelf: A Web-based Visual Interface for Large Gene Expression Time-Series Data Repositories	905
Bohyoung Kim, Bongshin Lee, Susan Knoblach, Eric Hoffman, Jinwook Seo	
Spatiotemporal Analysis of Sensor Logs using Growth Ring Maps	913
Peter Bak, Florian Mansmann, Halldor Janetzko, Daniel A. Keim	

Session 2: Models and Theories

Chair: T.J. Jankun-Kelly

A Nested Model for Visualization Design and Validation	921
Tamara Munzner	

Conjunctive Visual Forms	929
Chris Weaver	

Session 3: Graph Visualization

Chair: Nathalie Riche-Henry

Honorable Mention: Interaction Techniques for Selecting and Manipulating Subgraphs in Network Visualizations ...	937
Michael J. McGuffin, Igor Jurisica	
ActiviTree: Interactive Visual Exploration of Sequences in Event-Based Data Using Graph Similarity.....	945
Katerina Vrotsou, Jimmy Johansson, Matthew Cooper	
“Search, Show Context, Expand on Demand”: Supporting Large Graph Exploration with Degree-of-Interest	953
Frank van Ham, Adam Perer	
A Comparison of User-Generated and Automatic Graph Layouts.....	961
Tim Dwyer, Bongshin Lee, Danyel Fisher, Kori Inkpen Quinn, Petra Isenberg, George Robertson, Chris North	
Smooth Graphs for Visual Exploration of Higher-Order State Transitions.....	969
Jorik Blaas, Charl P. Botha, Edward Grundy, Mark W. Jones, Robert S. Laramee, Frits H. Post	

Session 4: Multidimensional Data Visualization

Chair: Niklas Elmqvist

Honorable Mention: Configuring Hierarchical Layouts to Address Research Questions.....	977
Aidan Slingsby, Jason Dykes, Jo Wood	
Visualizing Social Photos on a Hasse Diagram for Eliciting Relations and Indexing New Photos.....	985
Michel Crampes, Jeremy de Oliveira-Kumar, Sylvie Ranwez, Jean Villerd	
Interactive Dimensionality Reduction Through User-defined Combinations of Quality Metrics	993
Sara Johansson, Jimmy Johansson	
Scattering Points in Parallel Coordinates.....	1001
Xiaoru Yuan, Peihong Guo, He Xiao, Hong Zhou, Huamin Qu	
Bubble Sets: Revealing Set Relations with Isocontours over Existing Visualizations	1009
Christopher Collins, Gerald Penn, Sheelagh Carpendale	

Session 5: Space and Time

Chair: Jason Dykes

FromDaDy: Spreading Aircraft Trajectories Across Views to Support Iterative Queries	1017
Christophe Hurter, Benjamin Tissoires, Stéphane Conversy	
Honorable Mention: SellTrend: Inter-Attribute Visual Analysis of Temporal Transaction Data	1025
Zhicheng Liu, John Stasko, Timothy Sullivan	
Comparing Dot and Landscape Spatializations for Visual Memory Differences	1033
Melanie Tory, Colin Swindells, Rebecca Dreezer	
Flow Mapping and Multivariate Visualization of Large Spatial Interaction Data.....	1041
Diansheng Guo	
Temporal Summaries: Supporting Temporal Categorical Searching, Aggregation and Comparison.....	1049
Taowei David Wang, Catherine Plaisant, Ben Shneiderman, Neil Spring, David Roseman, Greg Marchand, Vikramjit Mukherjee, Mark Smith	

Session 6: Collaborative Visualization

Chair: Jeffrey Heer

ResultMaps: Visualization for Search Interfaces.....	1057
Edward C. Clarkson, Krishna Desai, James D. Foley	

Lark: Coordinating Co-located Collaboration with Information Visualization	1065
Matthew Tobiasz, Petra Isenberg, Sheelagh Carpendale	
The Benefits of Synchronous Collaborative Information Visualization: Evidence from an Experimental Evaluation	1073
Sabrina Bresciani, Martin J. Eppler	
Harnessing the Web Information Ecosystem with Wiki-based Visualization Dashboards.....	1081
Matt McKeon	
SpicyNodes: Radial Layout Authoring for the General Public.....	1089
Michael Douma, Grzegorz Ligierko, Ovidiu Ancuta, Pavel Gritsai, Sean Liu	

Session 7: Systems

Chair: Chris Weaver

code swarm: A Design Study in Organic Software Visualization	1097
Michael Ogawa, Kwan-Liu Ma	
Towards Utilizing GPUs in Information Visualization: A Model and Implementation of Image-Space Operations....	1105
Bryan McDonnel, Niklas Elmqvist	
A Multi-Threading Architecture to Support Interactive Visual Exploration	1113
Harald Piringer, Christian Tominski, Philipp Muigg, Wolfgang Berger	
Protovis: A Graphical Toolkit for Visualization	1121
Michael Bostock, Jeffrey Heer	
Visual Analysis of Inter-Process Communication for Large-Scale Parallel Computing.....	1129
Chris Muelder, Francois Gygi, Kwan-Liu Ma	

Session 8: Text Visualization

Chair: Christopher Collins

Participatory Visualization with Wordle.....	1137
Fernanda B. Viégas, Martin Wattenberg, Jonathan Feinberg	
Document Cards: A Top Trumps Visualization for Documents.....	1145
Hendrik Strobel, Daniela Oelke, Christian Rohrdantz, Andreas Stoffel, Daniel A. Keim, Oliver Deussen	
Visualizing the Intellectual Structure with Paper-Reference Matrices.....	1153
Jian Zhang, Chaomei Chen, Jiexun Li	
Exemplar-based Visualization of Large Document Corpus.....	1161
Yanhua Chen, Lijun Wang, Ming Dong, Jing Hua	
Best Paper Award: Mapping Text with Phrase Nets	1169
Frank van Ham, Martin Wattenberg, Fernanda B. Viégas	

Papers of the IEEE Visualization Conference 2009

Session 1: Surface Descriptors

Chair: Hamish Carr

Loop Surgery for Volumetric Meshes: Reeb Graphs Reduced to Contour Trees.....	1177
Julien Tierny, Attila Gyulassy, Eddie Simon, Valerio Pascucci	
Applying Manifold Learning to Plotting Approximate Contour Trees	1185
Shigeo Takahashi, Issei Fujishiro, Masato Okada	
Intrinsic Geometric Scale Space by Shape Diffusion	1193
Guangyu Zou, Jing Hua, Zhaoqiang Lai, Xianfeng Gu, Ming Dong	

Multi-Scale Surface Descriptors	1201
Gregory Cipriano, George N. Phillips Jr., Michael Gleicher	

Session 2: Evaluation Methods

Chair: Penny Rheingans

A User Study to Compare Four Uncertainty Visualization Methods for 1D and 2D Datasets.....	1209
Jibonananda Sanyal, Song Zhang, Gargi Bhattacharya, Phil Amburn, Robert J. Moorhead	
Comparing 3D Vector Field Visualization Methods: A User Study	1219
Andrew S. Forsberg, Jian Chen, David H. Laidlaw	
Verifiable Visualization for Isosurface Extraction.....	1227
Tiago Etiene, Carlos Scheidegger, L. Gustavo Nonato, Robert M. Kirby, Cláudio T. Silva	
Curve-Centric Volume Reformation for Comparative Visualization.....	1235
Ove Daae Lampe, Carlos Correa, Kwan-Liu Ma, Helwig Hauser	

Session 3: Particle Systems and Flow Visualization

Chair: Eugene Zhang

Predictor-Corrector Schemes for Visualization of Smoothed Particle Hydrodynamics Data	1243
Benjamin Schindler, Raphael Fuchs, John Biddiscombe, Ronald Peikert	
Exploring the Millennium Run - Scalable Rendering of Large-Scale Cosmological Datasets	1251
Roland Fraedrich, Jens Schneider, Rüdiger Westermann	
Interactive Streak Surface Visualization on the GPU	1259
Kai Bürger, Florian Ferstl, Holger Theisel, Rüdiger Westermann	
Time and Streak Surfaces for Flow Visualization in Large Time-Varying Data Sets.....	1267
Hari Krishnan, Christoph Garth, Kenneth I. Joy	

Session 4: Perception-Guided Visualization

Chair: Amitabh Varshney

Hue-Preserving Color Blending.....	1275
Johnson Chuang, Daniel Weiskopf, Torsten Möller	
Perception-Based Transparency Optimization for Direct Volume Rendering.....	1283
Ming-Yuen Chan, Yingcai Wu, Wai-Ho Mak, Wei Chen, Huamin Qu	
A Physiologically-based Model for Simulation of Color Vision Deficiency.....	1291
Gustavo M. Machado, Manuel M. Oliveira, Leandro A. F. Fernandes	
Depth-Dependent Halos: Illustrative Rendering of Dense Line Data	1299
Maarten H. Everts, Henk Bekker, Jos B.T.M. Roerdink, Tobias Isenberg	

Session 5: Multi-Projector Displays

Chair: Chair: Peter Lindstrom

Markerless View-Independent Registration of Multiple Distorted Projectors on Extruded Surfaces Using an Uncalibrated Camera	1307
Behzad Sajadi, Aditi Majumder	
Color Seamlessness in Multi-Projector Displays Using Constrained Gamut Morphing.....	1317
Behzad Sajadi, Maxim Lazarov, Aditi Majumder, M. Gopi	

Session 6: Visually Supported Analysis

Chair: TJ Jankun-Kelly

Visual Human+Machine Learning.....	1327
Raphael Fuchs, Jürgen Waser, Meister Eduard Gröller	

Interactive Visual Optimization and Analysis for RFID Benchmarking	1335
Yingcai Wu, Ka-Kei Chung, Huamin Qu, Xiaoru Yuan, S.C. Cheung	
A Visual Approach to Efficient Analysis and Quantification of Ductile Iron and Reinforced Sprayed Concrete	1343
Laura Fritz, Markus Hadwiger, Georg Geier, Gerhard Pittino, M. Eduard Gröller	
Interactive Visual Analysis of Complex Scientific Data as Families of Data Surfaces	1351
Krešimir Matković, Denis Gračanin, Borislav Klarin, Helwig Hauser	

Session 7: Time Dependent Data Visualization

Chair: Han-Wei Shen

Visualization and Exploration of Temporal Trend Relationships in Multivariate Time-Varying Data	1359
Teng-Yok Lee, Han-Wei Shen	
Isosurface Extraction and View-Dependent Filtering from Time-Varying Fields Using Persistent Time-Octree (PTOT).....	1367
Cong Wang, Yi-Jen Chiang	
Visual Exploration of Climate Variability Changes Using Wavelet Analysis	1375
Heike Jänicke, Michael Böttinger, Uwe Mikolajewicz, Gerik Scheuermann	
Interactive Coordinated Multiple-View Visualization of Biomechanical Motion Data.....	1383
Daniel F. Keefe, Marcus Ewert, William Ribarsky, Remco Chang	

Session 8: Medical and Molecular Visualization and Analysis

Chair: James Stewart

Interactive Visualization of Molecular Surface Dynamics.....	1391
Michael Krone, Katrin Bidmon, Thomas Ertl	
Stress Tensor Field Visualization for Implant Planning in Orthopedics.....	1399
Christian Dick, Joachim Georgii, Rainer Burgkart, Rüdiger Westermann	
Visual Exploration of Nasal Airflow	1407
Stefan Zachow, Philipp Muigg, Thomas Hildebrandt, Helmut Doleisch, Hans-Christian Hege	
Sampling and Visualizing Creases with Scale-Space Particles.....	1415
Gordon L. Kindlmann, Raúl San José Estépar, Stephen M. Smith, Carl-Fredrik Westin	

Session 9: Diffusion Tensor Imaging

Chair: Gordon Kindlmann

Volume Illustration of Muscle from Diffusion Tensor Images	1425
Wei Chen, Zhicheng Yan, Song Zhang, John Allen Crow, David S. Ebert, Ronald M. McLaughlin, Katie B. Mullins, Robert Cooper, Zi'ang Ding, Jun Liao	
A Novel Interface for Interactive Exploration of DTI Fibers	1433
Wei Chen, Zi'ang Ding, Song Zhang, Anna MacKay-Brandt, Stephen Correia, Huamin Qu, John Allen Crow, David F. Tate, Zhicheng Yan, Qunsheng Peng	
Parameter Sensitivity Visualization in DTI Fiber Tracking	1441
Ralph Brecheisen, Bram Platel, Anna Vilanova, Bart ter Haar Romeny	
Exploring 3D DTI Fiber Tracts with Linked 2D Representations.....	1449
Radu Jianu, Çağatay Demiralp, David H. Laidlaw	

Session 10: Transfer Function Design

Chair: Huamin Qu

Coloring 3D Line Fields Using Boy's Real Projective Plane Immersion.....	1457
Çağatay Demiralp, John F. Hughes, David H. Laidlaw	

The Occlusion Spectrum for Volume Classification and Visualization	1465
Carlos D. Correa, Kwan-Liu Ma	
Structuring Feature Space: A Non-Parametric Method for Volumetric Transfer Function Generation	1473
Ross Maciejewski, Insoo Woo, Wei Chen, David S. Ebert	
Automatic Transfer Function Generation Using Contour Tree Controlled Residue Flow Model and Color Harmonics	1481
Jianlong Zhou, Masahiro Takatsuka	
Session 11: Neurobiological and Molecular Imaging	
Chair: Raghu Machiraju	
An Interactive Visualization Tool for Multi-channel Confocal Microscopy Data in Neurobiology Research	1489
Yong Wan, Hideo Otsuna, Chi-Bin Chien, Charles Hansen	
BrainGazer – Visual Queries for Neurobiology Research	1497
Stefan Bruckner, Veronika Šoltészová, M. Eduard Gröller, Jiří Hladůvka, Katja Bühler, Jai Y. Yu, Barry J. Dickson	
Scalable and Interactive Segmentation and Visualization of Neural Processes in EM Datasets	1505
Won-Ki Jeong, Johanna Beyer, Markus Hadwiger, Amelio Vazquez, Hanspeter Pfister, Ross T. Whitaker	
Multimodal Vessel Visualization of Mouse Aorta PET/CT Scans	1515
Timo Ropinski, Sven Hermann, Rainer Reich, Michael Schäfers, Klaus Hinrichs	
Session 12: Visual Encoding	
Chair: Tobias Isenberg	
Quantitative Texton Sequences for Legible Bivariate Maps	1523
Colin Ware	
Continuous Parallel Coordinates	1531
Julian Heinrich, Daniel Weiskopf	
VisMashup: Streamlining the Creation of Custom Visualization Applications	1539
Emanuele Santos, Lauro Lins, James P. Ahrens, Juliana Freire, Cláudio T. Silva	
Focus+Context Route Zooming and Information Overlay in 3D Urban Environments	1547
Huamin Qu, Haomian Wang, Weiwei Cui, Yingcai Wu, Ming-Yuen Chan	
Session 13: Advanced Volume Visualization Techniques I	
Chair: Markus Hadwiger	
Kd-Jump: a Path-Preserving Stackless Traversal for Faster Isosurface Raytracing on GPUs	1555
David M. Hughes, Ik Soo Lim	
Mapping High-Fidelity Volume Rendering for Medical Imaging to CPU, GPU and Many-Core Architectures	1563
Mikhail Smelyanskiy, David Holmes, Jatin Chhugani, Alan Larson, Douglas M. Carmean, Dennis Hanson, Pradeep Dubey, Kurt Augustine, Daehyun Kim, Alan Kyker, Victor W. Lee, Anthony D. Nguyen, Larry Seiler, Richard Robb	
Volume Ray Casting with Peak Finding and Differential Sampling	1571
Aaron Knoll, Younis Hijazi, Rolf Westerteiger, Mathias Schott, Charles Hansen, Hans Hagen	
Interactive Volume Rendering of Functional Representations in Quantum Chemistry	1579
Yun Jang, Ugo Varetto	
Session 14: Advanced Volume Visualization Techniques II	
Chair: Ivan Viola	
GL4D: A GPU-based Architecture for Interactive 4D Visualization	1587
Alan Chu, Chi-Wing Fu, Andrew J. Hanson, Pheng-Ann Heng	

Decoupling Illumination from Isosurface Generation Using 4D Light Transport	1595
David C. Banks, Kevin M. Beason	
Supercubes: A High-Level Primitive for Diamond Hierarchies	1603
Kenneth Weiss, Leila De Floriani	
High-Quality, Semi-Analytical Volume Rendering for AMR Data.....	1611

Message from the Editor-in-Chief

Thomas Ertl

EIC IEEE *TVCG*
Universität Stuttgart

Welcome to the November/December 2009 issue of the *IEEE Transactions on Visualization and Computer Graphics (TVCG)*! I am pleased to introduce this 738 page issue containing all papers presented at the IEEE Visualization Conference and the IEEE Information Visualization Conference in Atlantic City, New Jersey, USA, from October 11 to 16, 2009. This is the fourth time that the papers recommended for acceptance by the paper cochairs of these two prestigious conferences are being published in this journal after undergoing a rigorous two-round review process. The goal of this cooperation between IEEE Computer Society Publications and the IEEE Visualization and Graphics Technical Committee (VGTC) is to present more high-quality research results from the world's top visualization conferences to *TVCG*'s readership while at the same time improving the overall paper quality of the conferences through a rigorous journal-style review. This conference issue again clearly demonstrates that the goal has been achieved. I welcome the readers to appreciate this unique collection of high quality visualization research.

Many individuals have committed their time and effort to this *TVCG* issue and I would like to thank them for their diligent work. The guest editors of this journal issue, the Visualization 2009 and Information Visualization 2009 papers cochairs, Kwan-Liu Ma, Torsten Möller, Hanspeter Pfister, Sheelagh Carpendale and Jean-Daniel Fekete, took on extra work and enthusiastically drove the two-round review process with tight deadlines to deliver this issue. The papers committee of each conference also played a crucial role by agreeing to oversee a second round of reviews for papers accepted pending minor revision. I would also like to recognize the outstanding work which went into the timely production of this issue which is the results of a close cooperation between the VGTC publication team, namely Meghan Haley, and the staff at IEEE Computer Society Publications, namely Alicia Stickley, Jennifer Carruth, Erin Espriu, Hilda Carman and Steve Wareham. I would like to acknowledge the support from behind the scenes from the conference steering committees, the IEEE VGTC Executive Committee and the IEEE Computer Society Publications Board.

If you are a new reader of *TVCG* exposed to this journal as a conference participant, please let me encourage you to also have a look at the regular issues of *TVCG* which are published bimonthly. *TVCG* is one of the top journals presenting important research results and state-of-the-art seminal papers related to computer graphics and visualization techniques, systems, software, hardware, and user interface issues. *TVCG* is the place to find extended versions of the best papers of many leading conferences, symposia, and workshops in the field. *TVCG* is well known for its fast reviewing cycles and for the early availability of preprints in the IEEE Computer Society Digital Library and in IEEE Xplore. I encourage you to browse through www.computer.org/tvcg and I ask you to consider to submit your work to *TVCG* and to become a personal subscriber.

Preface

Message from the Paper Chairs and Guest Editors

These are the proceedings of the IEEE Visualization Conference 2009 (Vis 2009) and the IEEE Information Visualization Conference 2009 (InfoVis 2009) held during October 11 to 16, 2009 in Atlantic City, New Jersey, USA. The power of using computing technology to create useful, effective imagery for analysis, understanding, and communication continues to inspire visualization researchers around the world. Both conferences spotlighted the most innovative and the very best research results. Historical acceptance rates for the two conferences can be found at: <http://vgtc.org/wpmu/techcom/conferences/sponsored-events/>.

Vis 2009

This year marks the 20th anniversary of our conference and we celebrate this anniversary with the best visualization research has to show. The IEEE Visualization 2009 papers program, contained in this special issue, accepted 54 papers describing state-of-the art tools, techniques and technology in the field of visualization. They were selected from 202 submissions by an international program committee of 57 members and supported by 868 reviews from 509 experts. The acceptance rate for IEEE Visualization 2009 is 26.7%.

This year, for the first time, we solicited five distinct type of papers - technique papers, system papers, design studies, evaluation papers, and model papers. The papers submitted to the Visualization conference were diverse in many dimensions, including a wide range of visualization techniques, their mathematical foundations, the computational environment considered, and the potential application areas, as well as a number of evaluation techniques. All of the authors put considerable effort into preparing their manuscripts.

The IEEE Visualization 2009 review process began with selecting a program committee of experts and issuing a general call for review volunteers. The submitted papers were assigned to program committee members based on a match of paper topic, committee member expertise, and committee member preferences. A great effort was made to identify potential conflicts of interests at all levels, and to preclude them from the review process. All reviewers were asked to read and agree to our new ethics guidelines [<http://vis.computer.org/VisWeek2009/ethics.html>].

As with the standard journal process, reviewing was done as a two-stage procedure. In the first review cycle, each paper was normally reviewed by four reviewers. Two international program committee members acted as the primary and secondary reviewers.

Like last year, a double-blind reviewing process was used for this cycle, where the authors' names and affiliations were only known to the primary and secondary reviewers. The responsibilities of the primary reviewer included appointing two external (tertiary) reviewers, discussing reviews with all reviewers, and writing a summary review and recommendation. The responsibilities of the secondary reviewer were to appoint one external (tertiary) reviewer, prepare a review of the paper, discuss the reviews with all reviewers, and

Jean-Daniel Fekete
INRIA

make a joint recommendation with the primary. The paper chairs then read the reviews, the paper discussion between all reviewers, the confidential comments from the reviewers, and considered the recommendation of the primary and secondary reviewers in conjunction with the scores and the expertise levels of the reviewers. The paper chairs then finalized collectively the decisions of the first review cycle. Both the committee members and the paper chairs based their decisions on the detailed reviewer's comments, not on raw numerical scores alone. In only few cases the papers chairs reached a conclusion that was different from the recommendation of the primary and secondary reviewers. In these cases, the primary and secondary were consulted to reach a consensus decision.

At the end of the first review cycle, 54 papers were conditionally accepted subject to minor revisions, and underwent a second review cycle for publication in TVCG and presentation at IEEE Visualization 2009. In this second review cycle the corresponding program committee members checked the revised manuscripts. Authors were also advised to provide a cover letter with comments on how they addressed the reviewers' comments and on changes that they incorporated. In the second review cycle the program committee members again provided a recommendation by determining if the authors satisfactorily addressed the issues raised by the reviewers in the first review cycle.

A discussion board facilitated the (anonymous) discussion of authors with primary and secondary reviewers, which made a big difference in improving the quality of the papers. At the end of the second review cycle there were six papers that still had conceptual issues to address. The primaries and the authors worked well together to improve these papers to the highest journal standard for publication

in TVCG. The final decision was made by the paper chairs by taking the recommendations of the committee members into account.

Papers that contained significant results but required more additional work than what could be accommodated in the tight conference revision schedule were rejected from IEEE Visualization 2009 but offered a fast track through the regular TVCG review process, where the Visualization 2009 review outcome is taken as first TVCG review cycle. Only about 5% (10 papers) of all submissions were offered this possibility.

The range of topics in IEEE Visualization 2009 papers show a very healthy, thriving visualization research community. Traditional areas, such as topology-based techniques, efficient and accurate volume rendering, and the analysis and visualization of time-varying data, are represented as well as growing interest evaluation studies, perceptually guided visualization, and visually supported analysis. Of the application areas, the medical domain still dominates our conference with a steady interest in diffusion tensor imaging and a growing interest in visualization and analysis of microscopy data. We hope you enjoy this year's compendium of work as it represents some of the best research in our field today.

The IEEE Visualization 2009 conference also features panels, tutorials, workshops, posters, the visualization contest, birds-of-a-feather meetings, the doctoral colloquium, the discovery exhibition, and the interactive demonstrations lab. Many individuals have contributed a great deal of time and energy to making the IEEE Visualization 2009 conference and this special issue a success. We thank the authors of all the submitted papers, the Program Committee, and all the other reviewers for the many hours of hard work.

INFOVIS 2009

InfoVis 2009 is the 15th annual InfoVis meeting and our third year as the IEEE Information Visualization Conference. InfoVis is the primary meeting in the field of information visualization. Computer-based information visualization centers around helping people explore or explain data through interactive software that exploits the capabilities of the human perceptual system. A key challenge in information visualization is designing a cognitively useful spatial mapping of a dataset that is not inherently spatial and accompanying the mapping by interaction techniques that allow people to intuitively explore the dataset.

Information visualization draws on the intellectual history of several traditions, including computer graphics, human-computer interaction, cognitive psychology, semiotics, graphic design, statistical graphics, cartography, and art. The synthesis of relevant ideas from these fields with new methodologies and techniques made possible by interactive computation are critical for helping people keep pace with the torrents of data confronting them. One of the few resources increasing faster than the speed of computer hardware is the amount of data to be processed.

Information visualization papers were solicited in five categories: technique, system, design study, evaluation, and

model. The InfoVis Conference received 141 submissions. This year the vitality in information visualization research was expressed in a 33% increase from the submissions from last year. All the 141 submissions were reviewed thoroughly. Each paper was reviewed by at least two Program Committee members and two external experts. Based on the reviews, the Papers Chairs carefully selected the papers for the 2009 conference. From the initial set of submissions, 37 papers were given a conditional acceptance with a set of prescribed changes and edits based on the reviews. The authors then revised their articles according to the reviewers' comments and resubmitted the new versions. The Papers Chairs evaluated the revised papers, assessing whether the edits made by the authors met the required conditions. Ultimately, all 37 of the conditionally accepted papers were accepted to appear at the conference. The overall acceptance rate was 26%.

The 2009 Best Paper Award Committee, Stuart Card, George Robertson, and Colin Ware, made their selection from the highest rated papers as determined by the reviewers. This year the Best Paper committee chose two Best Papers: ABySSexplorer: Visualizing Genome Sequence Assemblies, by Cydney Nielsen, Shaun Jackman, Inanc Birol, and Steven Jones; and Visual Overviews of Text with Phrase Nets, by Martin Wattenberg, Frank van Ham, and Fernanda Viegas. The ABySSexplorer looks at the large-scale genome sequencing problem and presents an approach that emphasizes the global assembly structure while also providing salient data features such as sequence length. The Phrase Net technique addresses text visualization issues and provides a method that generates visual overviews of unstructured text. The Best Paper awards recognize these papers as examples of excellent work that will stimulate further discussion and motivate new directions in the field. There are also four Honorable Mention Paper Awards: MizBee: A Multiscale Synteny Browser, by Miriah Meyer, Tamara Munzner, and Hanspeter Pfister; Configuring Hierarchical Layouts to Address Research Questions, by Aidan Slingsby, Jason Dykes, and Jo Wood; SellTrend: Inter-Attribute Visual Analysis of Temporal Transaction Data, by Zhicheng Liu, John Stasko, and Timothy Sullivan; and Interaction Techniques for Selecting and Manipulating Subgraphs in Network Visualizations, by Michael McGuffin, and Igor Jurisica.

InfoVis 2009 will for the first time host a Discovery Exhibition. This new venue will be a showcase for everyone in the visualization community, making it possible to share stories about the impact of visualization research on everyday life. Sharing these stories with the community will help us all improve our understanding about the role of visualization in many venues such as work, research, and entertainment. The Discovery Exhibition Chairs are Petra Isenberg, Bongshin Lee, and Jing Yang. The highly successful Interactive Posters program also continues for its ninth year, organized by Frank van Ham and Chris Weaver. We also thank our Panels Co-Chair Penny Rheingans, Tutorials Co-Chair Robert Kosara, Workshops Co-Chair Lyn Bartram, Exhibits Co-Chair Ming Hao, Birds-of-a-Feather Co-Chair

TJ Jankun-Kelly, and Doctorial Consortium Co-Chair Melanie Tory who collaborated with their Vis counterparts to produce an excellent overall program.

We thank the authors of all the submitted papers, the Program Committee, and all the other reviewers for the many hours of hard work that went toward making the conference a success. We deeply appreciate the efforts of InfoVis General Chair Chris North for many hours in coordinating all the conference activities in collaboration with Vis 2009 to ensure a successful event. We thank Jeff Heer for assistance in preparing the conference materials and Mike Sips for publicizing InfoVis 2009. Finally, we gratefully acknowledge the support of the IEEE Visualization and Graphics Technical Committee (VGTC), including sponsorship of the conference.

ACKNOWLEDGMENTS

As usual, we are indebted to the IEEE Visualization and Graphics Technical Committee (VGTC) Publications team, especially the Publications Coordinator, Meghan Haley, for coordinating schedules, collecting materials, and producing these beautiful color conference proceedings. Furthermore, we thank Steve Lamont for all his efforts and prompt edits to the conference website. This year, again, the IEEE Visualization and IEEE Information Visualization Paper Chairs made use of the SRM review system. We wish to acknowledge the great support and quick response from René Berndt and Stefanie Behnke at the Graz University of Technology whose outstanding support with the SRM system greatly enhanced the chairs experience. We warmly thank the IEEE Visualization Conference Chairs, Klaus Mueller, and Raghu Machiraju, and the IEEE Information Visualization Conference General Chair, Chris North, for their tireless dedication and valuable advice at every stage. We thank the Program Chairs, Rachael Brady and Han-Wei Shen, for their considerable help in numerous ways. We especially acknowledge the support of Thomas Ertl as Editor-in-Chief of TVCG, and Amitabh Varshney as Chair of VGTC. Lastly, we would like to thank the TVCG team for their time and many efforts in helping VGTC produce these proceedings, namely Alicia Stickley, Erin Espriu, Steve Wareham, Hilda Carman and Mari Padilla.

PAPER CHAIRS AND GUEST EDITORS

KWAN-LIU MA

University of California, Davis

Kwan-Liu Ma is a Professor of Computer Science at the University of California at Davis and the Director of the DOE SciDAC Institute for Ultra-Scale Visualization. He received his PhD in Computer Science from the University of Utah in 1993. He presently serves as an associate editor for both the *IEEE TVCG* and *CG&A*, and the *VisFiles* editor for the *ACM SIGGRAPH Computer Graphics Quarterly*.

TORSTEN MÖLLER

Simon Fraser University

Torsten Möller is an associate professor at the School of Computing Science at Simon Fraser University. He received his PhD in Computer and Information Science from Ohio State University in 1999 and a Vordiplom (BSc) in mathematical computer science from Humboldt University of Berlin, Germany. His research interests include the fields of Visualization and Computer Graphics, especially the mathematical foundations thereof. He currently serves as an associate editor of *IEEE TVCG* and *Computer Graphics Forum*.

HANSPETER PFISTER

Harvard University

Hanspeter Pfister is Gordon McKay Professor of the Practice in the School of Engineering and Applied Sciences at Harvard University. His research lies at the intersection of visualization, computer graphics, and computer vision. Before joining Harvard he worked for 11 years at Mitsubishi Electric Research Laboratories where he was most recently Associate Director and Senior Research Scientist. Pfister has a Ph.D. in Computer Science from the State University of New York at Stony Brook and an M.S. in Electrical Engineering from the Swiss Federal Institute of Technology, Zurich, Switzerland.

SHEELAGH CARPENDALE

University of Calgary

Sheelagh Carpendale is an Associate Professor in Computer Science at the University of Calgary. She holds a Canada Research Chair in Information Visualization and an NSERC/SMART/iCORE Industrial Research Chair in Interactive Technologies. Her research focuses on creating interactive visualizations of information, currently including: visualizing linguistic and biological data, visualizing uncertainty particularly in medical data, and the developing methodologies to support collaborative data analysis with visualization.

JEAN-DANIEL FEKETE

INRIA

Jean-Daniel Fekete is a Senior Research Scientist (DR2) at INRIA. He leads the AVIZ team since 2007, which focuses on analysis and visualization of large datasets, combining machine learning approaches with information visualization and multiscale interaction techniques to help analysts explore and understand massive data. His research is applied in several fields such as biology, business intelligence and social network analysis.

<http://vgtc.org>

MISSION

The IEEE Visualization and Graphics Technical Committee (VGTC) is a formal subcommittee of the Technical Activities Board (TAB) of the IEEE Computer Society. The VGTC provides technical leadership and organizes technical activities in the areas of visualization, computer graphics, virtual and augmented reality, and interaction.

The VGTC sponsors not only the annual VisWeek and Virtual Reality conferences, but also many focused symposia and conferences including EuroVis, 3D User Interfaces, VAST, Volume Graphics, PacificVis, Haptics and ISMAR.

AWARDS

To recognize its members for their outstanding technical accomplishments, the VGTC established a series of technical awards in 2005. The awards honor outstanding technical achievements in visualization and virtual reality. The VGTC awards chair for visualization is Bill Lorensen, and the awards chair for virtual reality is Larry Hodges.

NATIONAL INITIATIVES

The VGTC is actively involved in national initiatives that study and promote the immediate and long-range challenges in visualization and computer graphics and related research areas. For more information visit our web page at <http://vgtc.org>.

GETTING INVOLVED

Membership in the VGTC is open to all individuals interested in visualization, virtual reality and computer graphics at a professional level. There are no dues for VGTC membership and no IEEE membership requirements.

WEB SITE

Visit the VGTC web site at <http://vgtc.org>. It offers information about how to join, VGTC activities, awards, national initiatives, conferences and symposia, and contains a link to a comprehensive membership directory.

The 2008 Visualization Career Award

Lawrence J. Rosenblum

The 2008 Visualization Career Award goes to Lawrence (Larry) Rosenblum, in recognition of early technical contributions and unselfish work to nurture and sustain the field of visualization.

In the 1980s and early 1990s Larry developed visualization techniques that produced scientific advances in physical oceanography, ocean acoustics, ocean geophysics, and ocean engineering. He also initiated numerous activities to develop visualization as a recognized research field. Subsequent research by his group has advanced VR/AR, graphics, and visual analytics while he has continued to perform significant service to organizations and conferences in visualization and VR/AR. As a Program Officer at NSF and ONR, Larry developed new visualization research programs. For his outstanding contributions in research and in governmental program development, and for his pioneering work to nurture and sustain the field of visualization, the IEEE VGTC is pleased to award Larry Rosenblum the 2008 Visualization Career Award.

Lawrence Rosenblum
Award Recipient 2008

BIOGRAPHY

Larry Rosenblum is Director of the Virtual Reality Laboratory at the U.S. Naval Research Laboratory (NRL). He is currently detailed to the U.S. National Science Foundation (NSF), where he is Program Director for Graphics and Visualization. Majoring in Mathematics, he received his BA from Queens College (CUNY) and his MS and PhD (in Number Theory) from The Ohio State University. His introduction to visualization came when he used his wife's molecular modeling kit to visualize complex surfaces.

Larry has worked at NRL for the last thirty years, except for two assignments elsewhere. While working alongside NRL's scientists, he became convinced that many ocean science problems were actually visualization-limited. He took a graduate course in computer graphics from Jim Foley at GWU in 1981 and then set out to apply visualization to scientific data. In a sequence of papers in *J Geophysical Research*, Larry and George Marmorino used visualization to demonstrate a longstanding conjecture about ocean "fine-structure", to understand how it arises, and to statistically categorize it. Larry also animated physical oceanography simulations to gain new knowledge (e.g., Double Diffusive Convection Saltfingering, SIGGRAPH Video Review).

Subsequently, Larry and Behzad Kamgar-Parsi applied volume graphics and image processing to sonar data and demonstrated that high-resolution sonar imaging was possible, leading to new sonar systems. Larry's visualization research also impacted ocean geophysics, matched-field acoustic processing, and bathymetric mapping.

Recognizing that an important new field was coalescing, Larry conceived and co-founded the IEEE Visualization Conference. While serving as Liaison Scientist for Computer Science at the Office of Naval Research (ONR) European Office (1992-1994), he provided electronic reports on European activity, several of which were published in SIGGRAPH's *Computer Graphics*. During this period he also served as lead editor on the book *Scientific Visualization: Advances & Challenges*, which helped define the field

and was used in many of the early visualization courses in academia.

Returning to NRL, Larry focused primarily on virtual reality research, including seminal work in U.S. Responsive Workbench technology with encouragement from Wolfgang Krueger, and on augmented reality (AR) systems research. His group's research into uncertainty visualization produced interesting results (*CACM* Aug. 2004 cover), in part due to the availability of data from a large scientific experiment to quantify underwater uncertainty.

Larry also served as a Program Officer at ONR and NSF. At ONR, he formulated new research programs in volumetric modeling (e.g., volume graphics, level sets, tetrahedral modeling) and in augmented reality. At NSF, Larry worked with Jim Thomas to develop a jointly funded DHS/NSF program that is utilizing mathematics and computational science to place a firm scientific base under visual analytics data issues.

Larry has published over 80 technical articles. His work has appeared on The Learning Channel and CNN Headline News and in such media as the *NYT Science Times*, *MSNBC*, and *Popular Science*. He has served on several editorial boards including *IEEE TVCG* and *IEEE CG&A*, where he initiated and edited the *Visualization Blackboard* and the *Projects in VR Departments*. He has a long history of significant service to numerous organizations and conferences in visualization and VR. A Senior Member of the IEEE, Larry has received the IEEE Meritorious Service Award, the IEEE Outstanding Contribution Award, the NRL Alan Berman Research Publication Award, and a DHS/NVAC Award.

AWARD INFORMATION

The IEEE VGTC Visualization Career Award was established in 2004. It is given every year to an individual to honor that person's lifetime contribution to visualization. VGTC members may nominate individuals for the Visualization Career Award by contacting the awards chair, Bill Lorensen, at <http://tab.computer.org/vgtc/>.

The 2008 Visualization Technical Achievement Award

David Laidlaw

The 2008 Visualization Technical Achievement Award goes to David Laidlaw, Brown University, in recognition of outstanding technical work in the area of multi-valued data visualization.

David participated in the formative stages of the field of visualization as a co-architect of the first commercial scientific visualization system, AVS. This early work formed a strong foundation for his subsequent academic career. David has also used his interest and talents in painting, art and design to enhance the presentation of complex information. This award recognizes David's technical work on methods for visualization of vector and tensor fields. He has been able to identify and create new techniques that are technically innovative yet can still be applied to clinical problems. The IEEE VGTC is pleased to award David Laidlaw the 2008 Visualization Technical Achievement Award.

David Laidlaw
Brown University
Award Recipient 2008

BIOGRAPHY

David H. Laidlaw is a professor of computer science at Brown University. He received his PhD from Caltech in computer science, where his research centered around how to extract geometric information from volumetric magnetic resonance imaging data and how to optimally acquire such data. He then did three years of postdoctoral research in the Caltech Division of Biology applying image and acquisition results to help advance research in developmental neurobiology.

Dr. Laidlaw has long been interested in the application of computational and visualization tools to science. Starting in high school, he has developed collaborations with researchers in many disciplines, including biophysics, developmental neurobiology, evolutionary biology, medical imaging, neuropathology, orthopedics, art, cognitive science, remote sensing, and fluid mechanics. Applications from other disciplines give a real-world direction to computational research and are also compelling because they can provide concrete answers to questions about how our world works. Through these collaborations, he has been studying how computers can help scientists, developing new computational applications, and improving our understanding of the strengths and weaknesses of these applications.

Some research problems of particular interest to Prof. Laidlaw are visualization and modeling of multivalued multidimensional imaging data, comparisons of virtual and non-virtual environments for scientific tasks, and applications of art, perception, and cognition to visualization.

Dr. Laidlaw has published more than 70 peer-reviewed journal and conference papers, has served on or co-chaired dozens of conference committees, and has been an associate editor of IEEE Transactions on Visualization and Computer Graphics. He has been a recipient of several best-poster, best-case-study, and best-panel awards from IEEE

Visualization, two best-student-poster awards from ACM SIGGRAPH, and placed first with a collaborative submission to the 2008 NSF/Science International Science and Engineering Visualization Challenge.

AWARD INFORMATION

The IEEE VGTC Visualization Technical Achievement Award was established in 2004. It is given every year to recognize an individual for a seminal technical achievement in visualization. VGTC members may nominate individuals for the Visualization Technical Achievement Award by contacting the awards chair, Bill Lorensen, at <http://tab.computer.org/vgtc/>.

The 2009 Visualization Career Award

Hans Hagen

This 2009 Visualization Career Award goes to Hans Hagen, University of Kaiserslautern, in recognition of sustained and seminal contributions to Scientific Visualization.

Dr. Hagen has made significant scientific contributions, especially in the fields of geometric modeling and scientific visualization. Many of these contributions have influenced substantially the evolution of these research agenda in visualization and modeling. He is among the top leaders in these fields worldwide. It is particularly noteworthy that Hans Hagen established the first “International Research Training Group” (IRTG) involving his home university, UC Davis (lead US partner), University of Utah and Arizona State University. Over a period of nine years about 60 Ph.D. students will be supported to receive an integrated research training in the area of visualization and analysis of large unstructured data sets.

Inter alia, Dr. Hagen is the “spiritus rector” behind the highly successful Dagstuhl Visualization Conference series.

The IEEE VGTC is pleased to award Hans Hagen the 2009 Visualization Career Award.

Hans Hagen

University of Kaiserslautern
Award Recipient 2009

BIOGRAPHY

Dr. Hagen earned his Ph.D. degree in mathematics from the University of Dortmund, Germany. In his doctoral dissertation he solved problems in differential geometry, directly related to the mathematical foundations of general relativity. This scientific background allowed him to enter and make relevant contributions to the field of geometric modeling, a field now providing the basis for computer aided design (CAD) technology and systems. Over the past two decades his research efforts have had substantial impact in many engineering disciplines, especially in mechanical and civil engineering.

Dr. Hagen’s research contributions are as diverse as they are significant. Specifically, Dr. Hagen has substantially contributed to the development of modern approaches to “variational design”, a branch of geometric modeling concerned with a class of methods for smooth curve and surface design. These methods, many of them developed by Dr. Hagen, use the mathematical principle of minimizing energy functionals, with diverse applications in engineering. Dr. Hagen’s contributions in this area have led to the establishment of new industry standards.

Dr. Hagen has also pioneered research in vector and tensor field visualization. For example, the “stream ball concept” was originally proposed by him, making a major contribution to effective analysis of complicated vector fields. Especially over the past decade, Dr. Hagen has also established himself as one of the world’s leading scientists in topology-based visualization. This branch of scientific visualization has gained increasing significance in recent years due to the emerging need for radically different approaches for the characterization and analysis of complex, large data sets. Up to the present, Dr. Hagen has co-authored nearly 250 papers, His research efforts were supported by roughly \$18M over the past twenty years. He obtained funding from a variety of agencies, including the German Research Foundation (DFG), the European Union (EU), the German

Federal Ministry of Education and Research (BMBF), and industry.

The journal and conference papers co-authored by Dr. Hagen have appeared in premier places and are characterized by a high degree of originality, clear presentation style and mathematical rigor. He has presented his work at all leading international conferences in scientific visualization and geometric modeling and has published in all leading journals. Dr. Hagen served as Editor-in-Chief of the IEE Transactions on Visualization and Computer Graphics (TVCG) and has served as an associate editor for several major journals. These activities clearly document that Dr. Hagen is one of the most highly recognized leaders in his field, and is highly regarded by the scientific community.

Dr. Hagen is a highly talented speaker and gifted teacher. The list of Dr. Hagen’s Ph.D. advisees is extremely impressive. Many of his former Ph.D. students have gone on to become chaired and full professors at top universities within Germany, across Europe and in US. A number of his Ph.D. advisees are also serving in influential positions in the industry and in national laboratories in US and around the world. Clearly, Dr. Hagen has produced a large number of next-generation scientists who have already started making their own major contributions.

The 2009 Visualization Technical Achievement Award

Jock Mackinlay

This 2009 Visualization Technical Achievement Award goes to Jock D. Mackinlay, Tableau Software, in recognition of his seminal work on automatic presentation tools and new visual metaphors that helped to shape the field of information visualization.

Jock's 1986 Ph.D. dissertation at Stanford University developed a formal algebraic approach for the automatic design of graphical presentations of relational information. After graduation, he joined Xerox PARC, where he focused on user interaction. In 1991, he co-presented three papers at the CHI conference that established the field of information visualization. Over the next decade, he developed many visual metaphors, some inspired by his dissertation formalism. In 2004, Jock joined Tableau Software, where he is working to broaden the adoption of information visualization. His 2007 IEEE InfoVis paper described how his dissertation work on automatic presentation finally became widely available when it was added as a core function to a commercial visual analysis application. The IEEE VGTC is pleased to award Jock D. Mackinlay the 2009 Visualization Technical Achievement Award.

Jock Mackinlay
Tableau Software
Award Recipient 2009

BIOGRAPHY

Jock D. Mackinlay is Director of Visual Analysis at Tableau Software. In 1975, he received a BA with honors in Mathematics and Computer Science from UC Berkeley. His graduate work was done at Stanford University under Professor Michael R. Genesereth. His 1986 Ph.D. dissertation codified the semiology of graphics developed by the French cartographer Jacques Bertin. In particular, he developed algebraic operators that were used to automate the design of effective presentations of relational data.

At Xerox PARC, Jock focused on using 3D graphics and interactive animation to help people work with abstract information and data. Working in close collaboration with Stuart K. Card and George G. Robertson, he developed a system called the Information Visualizer that grew to contain many novel visualizations of information. Their work was foundational for the field of information visualization, a term they coined to distinguish their research from scientific visualization.

In 1999, Jock wrote and edited a book with Stuart K. Card and Ben Shneiderman titled *Readings in Information Visualization: Using Vision to Think*, which is a key reference work in the field of visualization. A reference model inspired by the formalism from Jock's dissertation was used in this book to describe a wide range of visualization systems.

Other interaction work at PARC included a collaboration with Polle T. Zellweger and Bay-Wei Chang. They developed Fluid Documents, which used interactive animation to incorporate additional material in documents. During a sabbatical to the University of Aarhus, Denmark in 2000-1 as visiting professors, Polle and Jock extended this work to Web standards with collaborators Niels Olof Bouvin and Kaj Grønbaek.

In 2004, Jock joined Tableau Software to work with founders Chris Stolte and Professor Pat Hanrahan after

serving on Chris's Ph.D. dissertation committee at Stanford University. Inspired by Jock's dissertation, Chris and Pat had developed a formal specification language that combines query, analysis, and visualization into a single framework. Their current joint work focuses on using this formalism to develop intuitive visual analysis applications for a wide range of users.

Jock has co-authored many scientific publications on visualization and human-computer interaction in a variety of refereed journal and conference publications, including IEEE TVCG, IEEE InfoVis, IEEE CG&A, IEEE Computer, Communications of the ACM, ACM SIGGRAPH, ACM TOIS, ACM TOG, ACM CHI, ACM UIST, WWW, and AAAI. He received the best paper award at IEEE Visual Languages'98 (co-authored with Polle T. Zellweger, Bay-Wei Chang, and Takeo Igarashi). He has served as a member of program committees and as a reviewer for most of the conference and journals in the fields of visualization and human-computer interaction. He was UIST'91 program chair and UIST'92 conference chair. He was co-papers chair for CHI'96. He was on the editorial boards for ACM TOCHI (1997-2003) and IEEE CG&A (2004-6). Jock is a co-inventor on almost 50 patents. In 2003, he received a Valuable Patent Award from PARC.

Vis / InfoVis Keynote Address

Visual Thinking and Visual Thinking Tools

Colin Ware

Data Visualization Research Lab, University of New Hampshire

ABSTRACT

“We know next to nothing about how collective cognition works, or when it works, or how to make it work better; we have some ideas about it, but at best they’ve the status of artisanal rules of thumb.”

— Bactra review of Edwin Hutchins’s book *Cognition in the Wild*.

I like to think of visualization designers as skilled craftspeople who make tools to help other people think better. As Edwin Hutchins and others have pointed out, most real world thinking occurs with external aids such as paper and pencil, maps and diagrams. This means that a real world psychology must incorporate cognitive tools and their interfaces together with classic constructs of perceptual psychology, like pattern perception mechanisms and visual working memory. Perception is an active process and visual thinking can be thought of as a set of distributed processes involving pattern finding, eye movements and visual working memory operations. Interacting with a computer is also an active process, involving activities like zooming in and out, or hiding and saving information. In visual thinking using visualizations some activities occur in the head and others in the computer. The visualization is the bridge. Using studies of visualizations designed to help analyze data — from social networks and from tagged foraging humpback whales — I suggest some “artisanal rules of thumb” that can be used to generalize from the specific examples. The exciting thing for those of us who design, is that half of the emerging discipline of real world cognition (it is too early to call it a science), has to be about things that are changing and evolving. It can be constructivist in the very literal sense of building tools.

BIO

Ware has a special interest in applying theories of perception to the design of geospatial data interfaces. He has advanced degrees in both computer science (MMath, Waterloo) and in the psychology of perception (PhD, Toronto). He has published over 130 scientific articles ranging from rigorously scientific contributions to the *Journal of Physiology* and *Vision Research* to applications oriented articles in the fields of data visualization and human-computer interaction. His book *Information Visualization: Perception for Design* is now in its second edition. His new book, *Visual Thinking for Design*, appeared in 2008. Ware also likes to build practical visualization systems. Fledermaus, a commercial 3D geospatial visualization system widely used in oceanography, was developed from his initial prototypes. His trackPlot software is being used by marine mammal scientists and his flowVis2D software will shortly be serving images on NOAA websites. Colin Ware is Director of the Data Visualization Research Lab which is part of the Center for Coastal and Ocean Mapping at the University of New Hampshire.

Vis / InfoVis Capstone Address

Visual aids: Use of Paintings and Photography for Lighting in the Theater

Brian MacDevitt
Broadway Lighting Designer

ABSTRACT

MacDevitt will discuss the role of a lighting designer in live Theatre, Dance and Opera. He will discuss the process lighting designers apply from “page to stage”, how they communicate visual ideas to directors and collaborators, and show examples of how the outside references have aided and furthered his work. Numerous examples from Broadway shows will be discussed and examined for principles of design involving the use of light, color, and visual aids. As a lighting designer in live theater, dance and opera, he must translate emotional responses to text, imagery, movement and music to an audience through light. Before arrival at the theater, he needs to find ways to communicate lighting ideas to directors and other collaborators. Many times he uses paintings and photography to support ideas and to inspire new ways lighting the stage. By exploring images from outside of the theater, he then can arrive at stage pictures that can challenge the “way it is done” or “what works”, which are handed down stage techniques that he believes are insular and stale.

BIO

Brian has designed lighting for Dance, Theater, and Opera internationally for over 30 years. Some highlights last season include, *The Three Sisters* at The Abbey Theater in Dublin, *Dr Atomic* at The MET and ENO, *Speed the Plow* with Jeremy Piven, *Blithe Spirit* with Angela Lansbury, Joe Turner’s *Come and Gone*, *You’re Welcome America* with Will Farrell on Broadway, and *Puncture* by Nancy Bannon at the Chocolate Factory. Some of MacDevitt’s other Broadway credits include *The Pillowman*, *The Coast of Utopia (Voyage)*, *Love! Valour! Compassion!*, *Urinetown*, *The Musical*, *Invention of Love*, *True West*, *The Diary of Anne Frank*, *Present Laughter*, *Nine*, *A Raisin In the Sun*, *The Color Purple*, and *Sideshow*. MacDevitt has worked with such dance companies as American Ballet Theatre, Tere O’Connor Dance, Baryshnikov’s White Oak Dance Project, Doug Varone and Dancers, Boston Ballet, and Nancy Bannon. Brian has received four Tony Awards, OBIE, Bessie (with Tere O’Connor), Outer Critics’ Circle Awards, Hewes Awards and Drama Desk Awards. He has been on the faculty of New York University’s Tisch School and SUNY Purchase, and is presently an Assistant Professor at the University of Maryland, College Park.
